

UMass Lowell, 5/14/25

To whom it may concern:

It is my pleasure to recommend Sai Ram Peruri for a technical position involving software development skills.

Sai Ram has worked as a TA and student grader for me in the Fall Semester of 2024 and again in the Spring Semester of 2025. In F24 he graded my Cloud Computing class. This class is very hands-on with many assignments using Amazon Web Service (AWS). Many of these assignments are focused on automation using AWS CLI, CloudFormation and CDK as well as AWS services including EC2, S3, Lambda, DynamoDB, RDS, ElastiCache, SQS and many others. Sai Ram was able to grade all assignments independently and in a timely manner using very little guidance or supervision. This demonstrated to me that he knew the subject matter (AWS) well. In the Sp25 semester he graded for my Computing I class and did very well there also. This is a class introducing students to programming using the C Programming language. Again, Sai Ram graded all assignments independently and on time thus demonstrating his knowledge of the C Programming language and software development fundamentals.

I also had various positive interactions with Sai Ram in person and via email and found him professional, easy going and diligent.

Based on what I have observed It is my belief that Sai Ram has a bright future ahead of him and the skill set to do well working in technology.

Best Regards
